

Family CANTHYLOSCELIDIDAE

The family Canthyloscelididae includes genera that were previously placed in the Hyperoscelidae (Canthyloscelididae is an older name for these taxa). Hutson (1977) reviewed the genera and revised the generic composition of this family and the family Synneuridae. Larvae of extant forms have been recorded from decaying wood of various trees.

Ref.: Hutson (1977, revision of extant taxa).

Genus PROHYPEROSCELIS Kovalev

PROHYPEROSCELIS Kovalev *in* Kalugina & Kovalev, 1985: 176. Type species: *Prohyperoscelis jurassicus* Kovalev, 1985, by original designation.

jurassicus Kovalev *in* Kalugina & Kovalev, 1985: 177. PA: Russia (Siberia) (Middle Jurassic) [C].
