

## Family EOPLECIIDAE

The Eopleciidae is an extinct family known only from the Jurassic. The family was originally proposed by Rohdendorf (1946) for the single genus *Eoplecia* Handlirsch. Hong & Wang (1990: 144) discussed the generic composition of the family and added the genus *Gansuplecia* Hong & Wang.

Kovalev (1982) implied that the venation of *Beipiaoplecia* Lin may have been misinterpreted and that the genus may belong to the asilomorphs, but when Kovalev (1990) added the genus *Eomycetophila* Kovalev and reviewed the generic composition of the Eopleciidae, *Beipiaoplecia* was retained. Zhang (1993b) considered *Beipiaoplecia* as unplaced to familial level. It is provisionally retained in this catalog in the Eopleciidae pending further study.
