

## Family LIMNORHYPHIDAE

The family Limnorhyphidae was proposed by Hong (1983) for the single genus *Limnorhyphus* Hong from the Middle Jurassic Haifanggou deposits of Liaoning, China. Hong (1983) placed it near the Olbiogastridae [= Anisopodidae] based on the wing venation. The antennae and wing venation are similar to Scatopsidae and Anisopodidae.

### Genus LIMNORHYPHUS Hong

**LIMNORHYPHUS** Hong, 1983: 132, 216. Type species: *Limnorhyphus haifanggouensis* Hong, 1983, by original designation.

**haifanggouensis** Hong, 1983: 132. PA: China (Middle Jurassic) [C].
