

Family LIMONIIDAE

Limoniids share many characteristics with tipulids, but are normally smaller in size, though exceptions occur. The family is found worldwide with approximately 11,000 species having been described. In extant forms, immatures are found in aquatic or semiaquatic environments where they feed on decaying plant matter, fungi, and algae. Adult males of certain species may swarm.

The separation of Limoniidae, Cylindrotomidae, and Tipulidae is retained in this catalog following the treatment of these families by contemporary European workers.

A possible limoniid has been recorded from the Lower Cretaceous amber of Lebanon by Whalley (1981) and undetermined material has been recorded from the Late Cretaceous amber of France by Schlüter (1978: 93) and the Cretaceous amber of Siberia (Zherichin & Sukacheva, 1973: 20; Zherichin, 1978: 82). Other undetermined records include material from the Miocene of Sado Island Japan (Fujiyama, 1985: 37), a possible new genus close to *Pseudolimnophila* Alexander and *Eutonia* Wulp from the Paleocene of Alberta, Canada (Wighton, 1982: 578), and two specimens probably representing new genera from the Lower Cretaceous deposits of the Koonwarra Fossil Bed, Australia (Jell & Duncan, 1986: 169).

***ANTOCHA** Osten Sacken, 1860: 219. Type species: *Antocha saxicola* Osten Sacken, 1860, by subsequent designation of Coquillett (1910: 508).

[In the interest of stability and in accordance with usage, the name *Antocha* is here retained for species in this genus, whereas Hutson & Vane-Wright (1969) recommend to consider *Taphrophila* as senior synonym of *Antocha*. The original type designation of *Taphrophila* is based on a misidentification while the description of *Taphrophila* refers to characters typical of *Antocha*. In this case, a subsequent type-designation is required. Acceptance of the original (misidentified) type species of *Taphrophila* cannot be recommended because it would result in *Taphrophila* becoming a junior synonym of *Limonia* and a senior synonym of *Atypophthalmus*.]
