

## Family TANYDEROPHRYNIDAE

Hennig's (1969c) discussion of the single representative of this family mentioned that it was most likely a member of the Psychodidae, taking into account probable inaccuracies in the illustration by Rohdendorf. The type specimen will have to be reexamined to verify Hennig's hypothesis.

### Genus TANYDEROPHRYNE Rohdendorf

**TANYDEROPHRYNE** Rohdendorf, 1962: 314 (1991: 456). Type species: *Tanyderophryne multinervis* Rohdendorf, 1962, by original designation.

**multinervis** Rohdendorf, 1962: 314 (1991: 456). PA: Kazakhstan (Upper Jurassic) [C].
