

THE ANNALS
AND
MAGAZINE OF NATURAL HISTORY.
[TENTH SERIES.]

No. 2. FEBRUARY 1928.

XIV.—*A Contribution towards the Insect Fauna of French Oceania*.—Part II. By L. EVELYN CHEESMAN, F.Z.S., F.E.S.

THE material for this paper forms part of the St. George Collection made upon two groups of islands in the South Pacific: namely, the Tuamotus and the Marquesas; also of my own collection from three islands of the Society group.

For the work which I have personally done on this material in the following paper and in Part I. (Trans. Ent. Soc. p. 147, 1927), and in papers published elsewhere, I have gratefully to acknowledge the aid of a research grant from the Royal Society.

DERMAPTERA.

1. *Chelisoches (Forficula) morio*, F., Syst. Ent. p. 270 (1775)
(Tahiti).

Marquesas Is. : Nuku-hiva, 1 ♂, Jan. 1925 (*St. George Exp.*). Society Is. : Tahiti, Fautaua Valley, 1 ♂; Lake Vaihiria, at 1200 ft., 1 ♀, 1925 (*L. E. C.*).

Numerous among coconut-shells and rubbish on the coast; also in the valleys on the under surface of "taro" leaves.

The life-history of this species has been fully worked out by Terry, Exp. Sta. Hawaiian Sugar Plan. Asso. Div., Ent. Bull. i. pt. 5, p. 164, pls. viii. & ix. (1905).

2. *Chælisoches* sp.

Society Is.: Tahiti, sea-level, 1 ♂; Lake Vaihiria, 1 ♀, in a tree-hole among rotting leaves. (One ♀ taken on Hiva-oa, Marquesas Is., is possibly a variety of this species.)

3. *Sparattina (Spongiphora) nigrorufa*, Burr, Termes. Fuzet. xxv. p. 4, pl. xx. fig. 3 (1902) (New Guinea).

Society Is.: Raiatea, Valley Vaiurumai, 5 ♂♂, 4 ♀♀. Numbers in flight apparently disturbed by the recent cutting of low scrub in a vanilla plantation.

4. *Labia (Forficelisa) curvicauda*, Motsch. Bull. Soc. Nat. Moscow, xxxvi. pt. ii. p. 2, pl. ii. fig. 1 (1863).

Marquesas Is.: Nuku-hiva, ♂ ♀, under bark at 2000 ft., Jan. 1925 (*St. George Exp.*). Society Is.: Raiatea, 2 ♂♂ at light, at sea-level, May 1925 (*L. E. C.*).

This small species is widely distributed throughout tropical and sub-tropical regions.

"This species I have found in Hawaiian Islands abundantly on plants imported from Samoa."—*R. C. L. Perkins*.

5. *Anisolabis (Forficula) annulipes*, Lucas, Bull. Soc. Ent. France, (2) v. p. lxxxiv (1847).

Marquesas Is.: Nuka-hiva, 5 ♀♀; Hiva-oa, 1 ♂ (1 ♂? var.); Fatu-hiva, 1 ♂, Jan. 1925 (*St. George Exp.*). Society Is.: Tahiti, Lake Vaihiria, 2 ♀♀, in a tree-hole with rotting leaves (one ♀ with immaculate femora); Vallée de la Mission, 2 ♀♀. Common under stones on all these islands.

6. *Sphingolabis (Forficula) hawaiiensis*, Born. Ann. Mus. Civ. Stor. Nat. Gen. xviii. p. 341, 3 figs. (1883).

Tahiti, Papenoo Valley, March 1925 (*L. E. C.*).

7. *Anisolabis (Forficula) maritima*, Géné, Ann. Sci. Nat. Regn. Lomb. Venet. ii. p. 224 (1832).

Taken in a nest with eggs in a crack of a tree, Vallée de Ste. Amélie at 3000 ft.

My thanks are due to Dr. R. C. L. Perkins for kindly naming some of these species.

HYMENOPTERA (ACULEATA).

APOIDEA.

Megachilidæ.

1. *Megachile diligens*, Sm. Journ. Linn. Soc., Zool. xiv. p. 684 (1879) (Honolulu).

Megachile doanei, Ckll. Ent. News Phil. xix. p. 466 (1908) (Tahiti).

Tuamotu Arch.: Napuka, 1 ♀, Feb. 1925 (*St. George Exp.*). Society Is.: Raiatea, 1 ♂; Bora Bora, 2 ♂♂, 1 ♀, June 1925 (*L. E. C.*).

Not numerous. All specimens from the Society Is. were taken on the blossoms of a trailing bean near the shore.

2. *Lithurgus (Megachile) scabrosus*, Sm. Journ. Proc. Linn. Soc. iii. p. 134 (1858) (Aru Is.).

Megachile albofimbriatus, Sichel, Reise Novara, Zool. ii. pt. 1, p. 151 (1867) (Tahiti).

Specimens from Tahiti were compared with the type (♀) from the Saunders Collection in the Hope Museum at Oxford.

In 1908, Kohl (Denk. Akad. Wiss. Wien, Bd. lxxxii. p. 308) added the following emendations to the original description:—"Die Gesichtstüberkel ist ganz gut ausgebildet, darum trifft der Ausdruck 'fronte subtuberculata' nicht zu. Die Behaarung des Prothorax ist grossenteils weiss, ebenso sind es Stellen auf dem Mittelsegment und neben dem Schildchen, und daher ist der Thorax nicht streng 'nigricanti pilosus' zu nennen. Schwarzlich ist vorzüglich die Behaarung der Thoraxseiten und des Brust."

Marquesas Is., Nuku-hiva, 1 ♂, 1 ♀; Hiva-oa, 3 ♀♀, Jan. 1925 (*St. George Exp.*). Society Is.: Tahiti, Papeete, 2 ♀♀, 8. iii. 25; Papenoo, 2 ♀♀, 15. iv. 25; Taravau, 1 ♀, 9. vii. 25; Raiatea, 1 ♀, 10. v. 25; Bora Bora, 1 ♂, 2 ♀♀, 10. vi. 25 (*L. E. C.*). Specimens in the B.M. from Fiji, Samoa, Rarotonga.

Numerous on all the islands. The "hu-hu" (Tahitian); nests in door-posts, beams, etc.

SPHECOIDEA.

Sphegidæ.

3. *Sceliphron (Pelopœus) cæmentarium*, Drury, Illustr. Nat. Hist. i. p. 105 (1770).

Pelopœus tahitensis, Sauss. Reise Novara, Zool. ii. p. 67 (1867) (Tahiti).

Marquesas Is.: Nuku-hiva, Fatu-hiva, Hiva-oa, 3 ♂♂,
12*
